PROFESSIONAL SUMMARY

Computer Science (Honours) student at the University of Wolverhampton with 3 internships and 8+ live-deployed projects across React.js, Next.js, PHP, MySQL, Node.js, Python, and Tailwind CSS. Proven ability to build fullstack web applications, RAG-based AI systems, design normalized relational database schemas, and deliver responsive UI components under real internship deadlines. Targeting Frontend Developer, Full-Stack Developer, Backend Developer, React Developer, PHP Developer, and SQL Developer roles where rapid delivery of production-ready features drives measurable impact.

TECHNICAL SKILLS

Frontend: React.js, Next.js, React Router, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Responsive Web Design, SPA Development

Backend: PHP, Node.js, FastAPI (Python), REST API Integration, CRUD Operations, Server-side Scripting

AI / ML: LangChain, LangGraph, ChromaDB, RAG Pipelines, Hybrid Search (BM25 + Vector), Groq AI API, OpenAI API, Twilio (WhatsApp Bot)

Databases: MySQL, PostgreSQL, Supabase, ChromaDB, Relational Schema Design, SQL Queries, JOIN Operations, LocalStorage

API Languages: JavaScript, TypeScript, PHP, Python, Java, C#, C

Programming Tools & Platforms: Git, GitHub, Vercel, Render, GitHub Pages, VS Code, Unity Engine, GitHub Actions (CI/CD)

Soft Skills: Technical Communication, Self-directed Learning, Client Counselling, Remote Team Collaboration, Deadline Management

WORK EXPERIENCE

Frontend Developer Intern | Codynn — Virtual | Jan 2025 – Jun 2025

- Delivered a fully responsive Project Management System landing page using Tailwind CSS, achieving pixel-perfect cross-device layouts across mobile, tablet, and desktop breakpoints.
- Applied React Hooks (useState, useEffect) and React Router DOM to engineer a zero-page-reload Single Page Application (SPA) experience with client-side navigation across 4+ distinct views.
- Worked within a structured internship delivery cycle, shipping 2 production features (landing page + CRM UI) across a 6-month engagement with consistent weekly progress check-ins.

Technical Content Developer Intern | Codynn — Virtual | Jan 2025 – Jun 2025

- Produced a 2-hour full-stack Project Management System coding tutorial published on YouTube, covering database schema design, PHP backend logic, and HTML/CSS frontend integration.
- Authored structured written content for 3+ programming courses, translating intermediate-to-advanced concepts into step-by-step learning modules consumed by enrolled students.

Business Development (Sales) Intern | Innovate Nepal Group (ING) — Onsite | May 2025 – Dec 2025

- Managed end-to-end client onboarding pipelines through structured counselling sessions, contributing to the team consistently achieving its monthly acquisition targets.
- Coordinated with a remote cross-functional team of 5+ members to execute sales strategies, strengthening asynchronous communication skills directly applicable to distributed engineering teams.

PROJECTS

Provify – AI Code Interview Platform ↗

— Python, FastAPI, ChromaDB, LangChain, LangGraph, Groq, OpenAI, FastEmbed, Next.js, Render, Vercel | Jul 2026

- Built a per-session RAG pipeline over user-uploaded project ZIPs (692 chunks, ChromaDB vector store) enabling an AI agent to ask grounded technical questions referencing actual variable names, function logic, and architectural decisions — not generic concepts.
- Engineered a LangGraph StateGraph interview agent with two-tier chunk deduplication (unused source file first, then unused chunk content) to prevent repetitive questions across a 10-question dynamic interview session.
- Implemented per-session RAG isolation so each user's codebase stays private, with recursive Supabase Storage traversal handling deeply nested project folder structures and empty-file filtering at both fetch and chunk stages.
- Built a full Next.js frontend with a client-side interview state machine (answering → submitting → feedback → next), segmented score meter, peek toggle with score penalty, and a complete history view showing per-question breakdowns with ideal answers and source file tags.
- Deployed FastAPI backend on Render and Next.js frontend on Vercel with LLM inference powered by Groq (llama-3.3-70b-versatile), LangSmith for full observability tracing, and Supabase for auth and PostgreSQL persistence with RLS policies.

Know Your Rights – Legal RAG System + Whatsapp Bot ↗

— Python, FastAPI, ChromaDB, LangChain, Groq, Twilio, Next.js, Render, Vercel | Jun 2026

- Built a production RAG pipeline over 4 Nepali government acts (320 chunks, ChromaDB vector store) enabling citizens to query legal rights in plain language.
- Implemented hybrid search combining BM25 keyword retrieval with semantic vector search, improving retrieval accuracy from 83% to 100% across a hand-crafted 12-case evaluation suite.

- Developed a 9-case red-team adversarial test suite covering jailbreak attempts, out-of-scope queries, and ambiguous intent — hardening the system against misuse before deployment.
- Extended the system into a WhatsApp bot via Twilio integration, adding multi-turn conversation memory and intent detection for a natural, context-aware Q&A; experience. • Deployed FastAPI backend on Render and Next.js frontend on Vercel with full CI/CD; LLM inference powered by Groq API for lowlatency responses

AI Spend Audit Tool ↗

— *Next.js 14, TypeScript, Tailwind CSS, Supabase, Groq AI API, Vercel* | May 2026

- Built a full-stack AI spend auditing web app as part of a competitive internship assignment, enabling startup founders to input AI tool subscriptions (ChatGPT, Cursor, Claude, GitHub Copilot, etc.) and receive an instant audit showing overspend and potential savings.
- Engineered a deterministic audit engine in TypeScript with defensible per-tool savings logic, 5+ Jest unit tests, and a GitHub Actions CI/CD pipeline maintaining green checks on every push to main.
- Integrated Groq AI API to generate personalised ~100-word audit summaries with graceful fallback to templated output on API failure; implemented shareable UUID-based audit URLs with Open Graph meta tags for viral sharing.
- Implemented lead capture with Supabase (PostgreSQL) storage, transactional email via Resend, and honeypot-based abuse protection; deployed to Vercel achieving Lighthouse Performance ≥85, Accessibility ≥90.

Doctor Appointment Booking System ↗

— *JavaScript, PHP, MySQL, TailwindCSS* | April 2026

- Built a full-stack doctor appointment booking web app as part of a college collaborative development assessment, supporting three distinct roles. Admin, Doctor, and Patient with secure login, role-based dashboards, and end-to-end appointment management.
- Engineered a PHP + MySQL backend with structured relational database design, implementing rolebased access control, appointment scheduling logic, and RESTful-style endpoints consumed by a dynamic JavaScript frontend.
- Designed a responsive, multi-role UI using Tailwind CSS, enabling patients to register and book appointments, doctors to manage availability, and admins to oversee the entire system from a centralised dashboard.
- Implemented OTP-based email verification for the forgot password flow, adding a secure account recovery mechanism alongside full session-based authentication.
- Deployed on InfinityFree with a live demo environment — Admin: admin@healthcare.com / Admin@123 | Doctor: sarah@healthcare.com / Sarah@123 | Patient: register directly via the app.

Course Management System ↗

— HTML5, CSS3, PHP, MySQL | Jan 2026 – Feb 2026

- Architected a full-stack LMS as a graded university assessment, implementing MVC-style separation between a PHP backend, normalized MySQL database, and HTML/CSS frontend.
- Designed a relational MySQL schema with 4+ tables (users, courses, enrollments, content) and wrote optimized SQL JOIN queries to power instructor and student dashboards.
- Admin and Student password: password123

EDUCATION

Bachelor of Computer Science (Honours) | University of Wolverhampton, UK | 2024 – 2027

Senior Secondary (Grade XII) — Management | Liverpool International College, Kathmandu | 2024 | GPA: 3.77 / 4.00

Secondary (Grade X) — SEE | Gyan Niketan Secondary School, Kathmandu | 2022 | GPA: 3.75 / 4.00

IMPLIED SKILLS — IDENTIFIED FROM PROJECT & INTERNSHIP ANALYSIS

- Deployment & Hosting — 8+ projects live on GitHub Pages, Vercel, and Render, demonstrating hands-on experience with static site and API deployment and CI/CD pipelines including GitHub Actions.
- REST API Consumption & Integration — proven through QR Code API, Groq AI API, Supabase SDK, Twilio, and FastAPI; directly transferable to consuming and building RESTful endpoints.
- AI / RAG Engineering — end-to-end RAG pipeline (ChromaDB, LangChain, LangGraph, hybrid BM25 + vector search) with eval suites and red-team testing; signals ML engineering rigour beyond standard web dev.
- Full-Stack TypeScript — demonstrated through the AI Spend Audit Tool built with Next.js 14 App Router, typed API routes, and end-to-end type safety across client and server.
- Technical Documentation & Knowledge Transfer — authoring a 2-hour YouTube tutorial, 3+ course modules, and structured markdown documentation (README, ARCHITECTURE, DEVLOG) signals ability to write clear internal technical wikis
